Electrophotographic toner - contains a bisphenol deriv. as charge
controlling agent

Patent Assignee: NIPPON KAYAKU KK (NIPK)

Number of Countries: 001 Number of Patents: 002

Patent Family:

Patent No	Kind	Date	Applicat No	Kind	Date	Week

Priority Applications (No Type Date): JP 84122052 A 19840615; JP 84122053 A
19840615

Patent Details:

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
JP 61003149	A		6		
JP 92016109	B		8		

Abstract (Basic): JP 61003149 A

Toner contains cpd. of formula (I) as charge controlling agent. In
(I), R1-4 each is H, 1-8C alkyl, allyl or halogen; and X is -S-, -SO2-
or CR5R6, where R5 and R6 each is H or 1-8C alkyl.

Colouring agent, binder resin and (I) are kneaded in fused
condition using heater kneader etc., cooled to solidify and ground to
fine particles having size of 1-50 microns by jet mill, ball mill etc..
Suitable colouring agents include C.I. Pigment Yellow 142, C.I. Solvent
Red 179, C.I. Solvent Blue 105, C.I. Disperse Yellow 114, carbon black
etc.. Suitable binder resins include acryl resin, polystyrene,
styrene-methacrylate copolymer, epoxy resin, polyester resin etc..

Pref. addn. amt. of (I) is 0.5-10 pts. wt. per 100 pts.wt. of binder.

ADVANTAGE - Since (I) is colourless, hue required of toner can be
obtd. with ease by using dye or pigment properly and (I) has no
influence on original hue of dye or pigment. Charging capacity of (I)
ranges from 90 to 100 micro c/g (cf. 40-50 micro c/g in case of metal
complex of salicylic acid, and 70-80 micro c/g in case of dye of 2:1
metal complex type) and the resulting toner can provide very clear
image. The toner has excellent moisture resistance, does not generate
background stain and does not cause pollution problem due to absence of
heavy metals. (6pp Dwg.No.0/0)

Title Terms: ELECTROPHOTOGRAPHIC; TONER; CONTAIN; BISPHENOL; DERIVATIVE;
CHARGE; CONTROL; AGENT
